

CSI Case Report

Executive Summary

(Summary unavailable: API Quota Exceeded. Please try again later.)

Scene Description

A street-side jewellery store reported a break-in after the alarm system was triggered shortly after midnight. The front glass display window was shattered inward, and multiple jewellery items were reported missing. Inside the store, glass shards were scattered across the floor. A trail of blood was observed leading from the display counter toward the storage room at the rear of the shop. A metal crowbar and a single black glove were recovered near the safe. Blood smears were visible on the counter edge, and the cash register was found open. Investigators noted signs of movement after injury, suggesting the suspect may have sustained a wound during the incident.

Evidence Table

ID	Type	Location	Description	Confidence
----	------	----------	-------------	------------

---	---	---	---	---
-----	-----	-----	-----	-----

EV-ddfb88c5-1	blood_stain	derived from scene text	Detected blood_stain based on description or image.	0.75
---------------	-------------	-------------------------	---	------

EV-ddfb88c5-2	window	derived from scene text	Detected window based on description or image.	0.75
---------------	--------	-------------------------	--	------

EV-ddfb88c5-3	forensic_clue	contextual	movement after injury	0.85
---------------	---------------	------------	-----------------------	------

Timeline

- Step 1: Suspect arrived at the scene - Evidence - - Movement or entry indicators detected
- Step 2: Victim sustained injuries - Evidence - - Blood evidence confirms impact

Suspect Hypotheses

- SP-293971: age 25-40, build medium, confidence 0.45. Reason: Based on knife evidence, probable right-hand usage, medium build typical for single aggressor.
- SP-2eb524: age 18-28, build slim, confidence 0.28. Reason: Lighter build hypothesis due to limited physical disturbance at the scene.
