

CSI Case Report

Executive Summary

CASE-fdd856e9 presents evidence of a disturbance within the living area, indicated by shattered glass and an overturned chair. The presence of two blood stains strongly suggests significant injury to an individual, potentially from an assault involving an unknown object. Although forced entry is indicated, the exact method and weapon remain undetermined. Suspect profiles are varied, with probabilities leaning towards a male, medium-build individual with moderate experience, though other profiles remain plausible based on the limited physical evidence.

Scene Description

Living room: shattered glass, two blood stains, overturned chair, possible forced entry.

Evidence Table

ID	Type	Location	Description	Confidence
----	------	----------	-------------	------------

---	---	---	---	---
-----	-----	-----	-----	-----

EV-b1d504d5-1	blood_stain	derived from scene text	Detected blood_stain based on description or image.	0.75
---------------	-------------	-------------------------	---	------

EV-b1d504d5-2	chair	derived from scene text	Detected chair based on description or image.	0.75
---------------	-------	-------------------------	---	------

Timeline

- Step 1: Victim sustained injuries - Evidence - - Blood evidence confirms impact

Suspect Hypotheses

- SP-40ee5f: age 25-40, build medium, confidence 0.45. Reason: Based on knife evidence, probable right-hand usage, medium build typical for single aggressor.
- SP-ec60b1: age 18-28, build slim, confidence 0.28. Reason: Lighter build hypothesis due to limited physical disturbance at the scene.
- SP-5bff5c: age 30-50, build heavy / strong, confidence 0.22. Reason: Blood pattern suggests forceful injury - possibly requiring more strength.
